Our Approach to Support the Type 1 Diabetes Community

As the only community organization, representative of the type 1 diabetes community of Pakistan at a national scale, we take great care and pride in delivering the support required by the community in the way that works best for them. Nothing about the diabetes community without the diabetes community is our driving force in every project model and design, which is why they stand out as unique, robust and meaningful for the community.

Duly registered, certified by Pakistan Centre for Philanthropy, holding Zakat Compliance Certificate, and recognized as a tax exempt charity by FBR in Pakistan, while having a 501(c)3 status in USA, Meethi Zindagi is a name of trust, excellence and credibility. Working with a strong volunteer base of the type 1 diabetes community, a multifaceted Board and management, where each member brings in key skills and experiences, we have tailored emerging tools and methods in a culturally appropriate way. We believe in creating impact through distributed models to strengthen the existing healthcare systems by filling the gaps where they exist. To support the community, we take the care near or to their homes.

Our independent thought process and protocols, co-created with the type 1 diabetes community, represent a fresh and progressive outlook to tackle the challenging task of supporting the type 1 diabetes community of Pakistan to ensure great lives. For more information, please visit www.meethizindagi.org

Access to Insulin & Diabetes Supplies:

Without regular, uninterrupted availability of medicines and diabetes supplies, no one with type 1 diabetes can lead a healthy life. Personalized, flexible treatment options and regular availability, without having to spend a lot of money and time in accessing free care, are the key foundations of our flipped home delivery model for **Promise of Insulin**, which is now operational in over 105 cities, towns and villages and is monitored through a digital web based platform. Details on subsequent pages.

Access to Quality Health Care:

A vast network of health professionals and hospitals/diabetes care clinics is associated with the organization, bringing care, which includes education and peer support, closer to those in remote areas. Meethi Zindagi regularly collaborates with health professionals and institutes to fill the gaps and provide them with resources and training where needed.

2

3

Empowering Self Management Education:

Culturally tailored **Digital Diabetes Education Platform for Children & Young People with T1D**, in partnership with DigiBete UK, funded by World Diabetes Foundation is Pakistan's first and only Type 1 Diabetes specific educational resource.

Pakistan's first and only structured education curriculum for teens and adults with type 1 diabetes by the name of **SETUP** was co-created with the type 1 diabetes community in form of a book and workshops which are conducted in major cities.

Diabetes education should be fun! **Diabetes Camps**, with Diabetes Education and Camping Association (DECA, USA) as the technical partners, are held so that children can learn about self management while having fun!

Children supported by the Promise of Insulin are being looked after by **tele-educators**, who educate the families on telephone.

Peer Support:

Peer Support is the cornerstone in everything that we do. People with type 1 diabetes should not feel alone, confused or misunderstood. They can learn how to cope with their condition in a safe space where they can interact freely with their peers. Meethi Zindagi has social media based **peer support groups** and also holds **Meethi Chah** meet-ups which are self help support group sessions. Twice a year, a batch of volunteer peer leaders is trained to lead the peer support activities by keeping the community engaged and the organic discussions supported with the right information.

4

5

Awareness & Advocacy:

An aware society is a supportive society. Meethi Zindagi regularly holds **awareness** sessions in schools and corporate. Advocacy is best backed by data. In collaboration with T1International, our volunteer teams work on an advocacy framework for changing policies to ensure **insulin4all**. Meethi Zindagi successfully convinced the Punjab government to pilot an insulin support program in 3 districts and hopes for roll out and effective implementation.

Meethay Bol (translated as *sweet words*) is a Diabetes Language Matters guideline for Pakistan, that has been developed by our volunteer groups is helping build positive interactions.

Promise of Insulin Thought Process & Key Features

After studying Pakistan's healthcare system and the challenges faced by the type 1 diabetes community in accessing the support offered by the handful of government hospitals and other charity organizations, our Board concluded the following 4 x factors of prime importance, to ensure that the beneficiaries enjoy good quality of life, explained in Figure below:

1. Regularity of support Promise of Insulin ensures regularity of support, which is often an issue with many public as well as charity institutes, by (a) registering a child only when six months' worth of finances / supplies are available, and (b) through donors pledging long term support for the registered children.

2. No need to travel and wait in lines to get monthly medicines! Support package is sent to home of each beneficiary on monthly basis through partnering cold chain maintained distribution service. The child is required to follow up with the consulting doctor every 3 months.

4- Better futures: Except in special circumstances, we require the school going age children to enroll in schools and maintain an attendance benchmark. This helps ensure that children are not kept out of schools by parents or schools and they can have better work opportunities when they grow up

3. Flexibility in treatment: Every child is provided what he/she requires to live a quality life. Based on a medical and quality of life assessment by the consulting doctor, we provide the kind of insulin (human / analogs and vials / pens best suited for the child), 100 test strips and needles/syringes, as well as quarterly HbA1C tests.

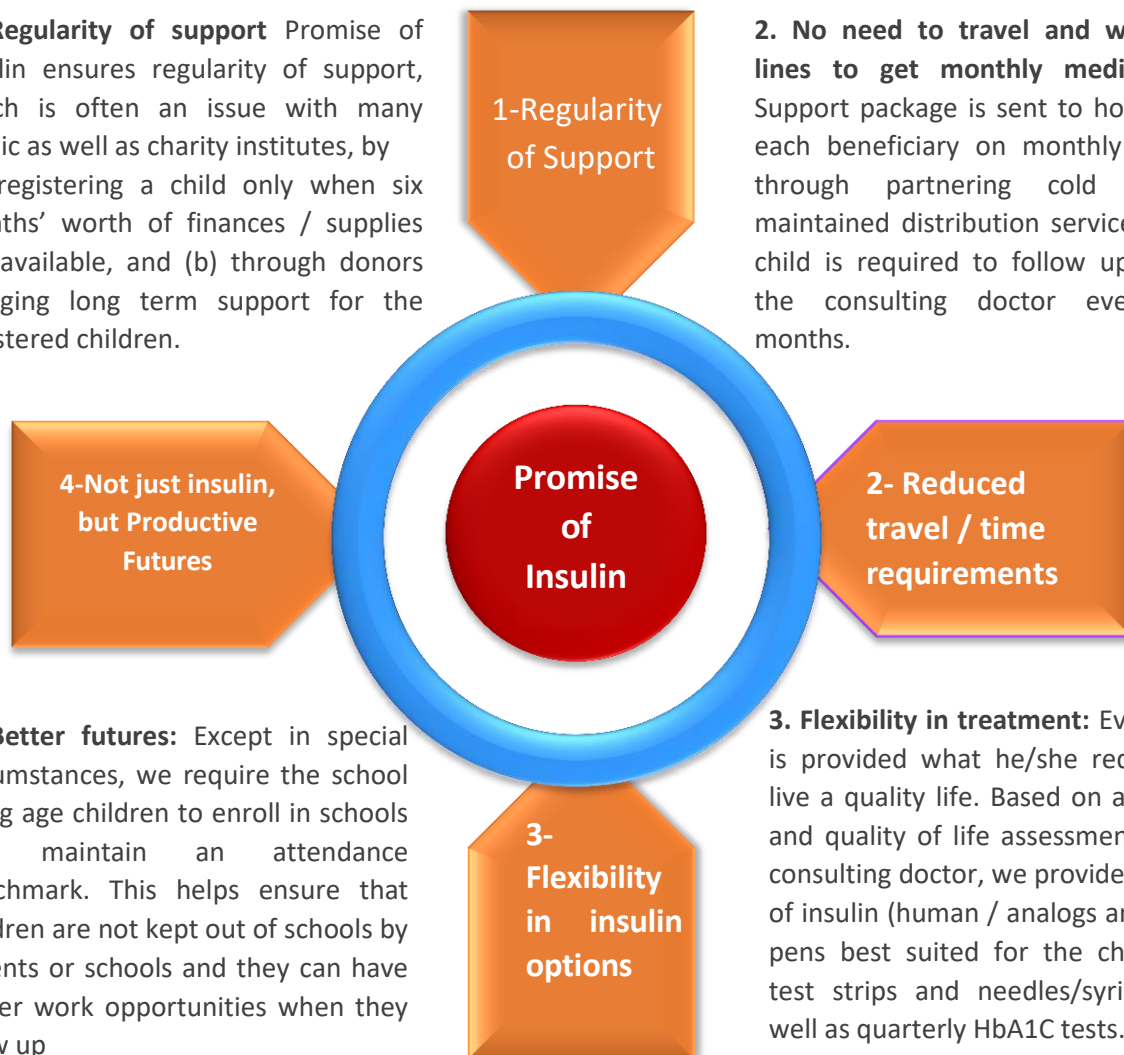

Figure: The 4 key strategic components of Promise of Insulin program

Promise of Insulin

Our Outreach Model

Meethi Zindagi works with health professionals in public sector and charity hospitals, distributed throughout Pakistan. As of Dec 2024, 75 doctors are collaborating with the Promise of Insulin Program to care for the children by providing them free consultation and management education.

For insulin and test strips support, and for providing on-going basic diabetes education, they refer the underprivileged children requiring support to Meethi Zindagi – Based on the doctor's prescription, the support is delivered to the child's home.

Furthermore, we collaborate with networks of labs to get the quarterly blood work done near homes of these children – so that while we take care of their health, they spend time taking care of their education and building healthy, productive lives.

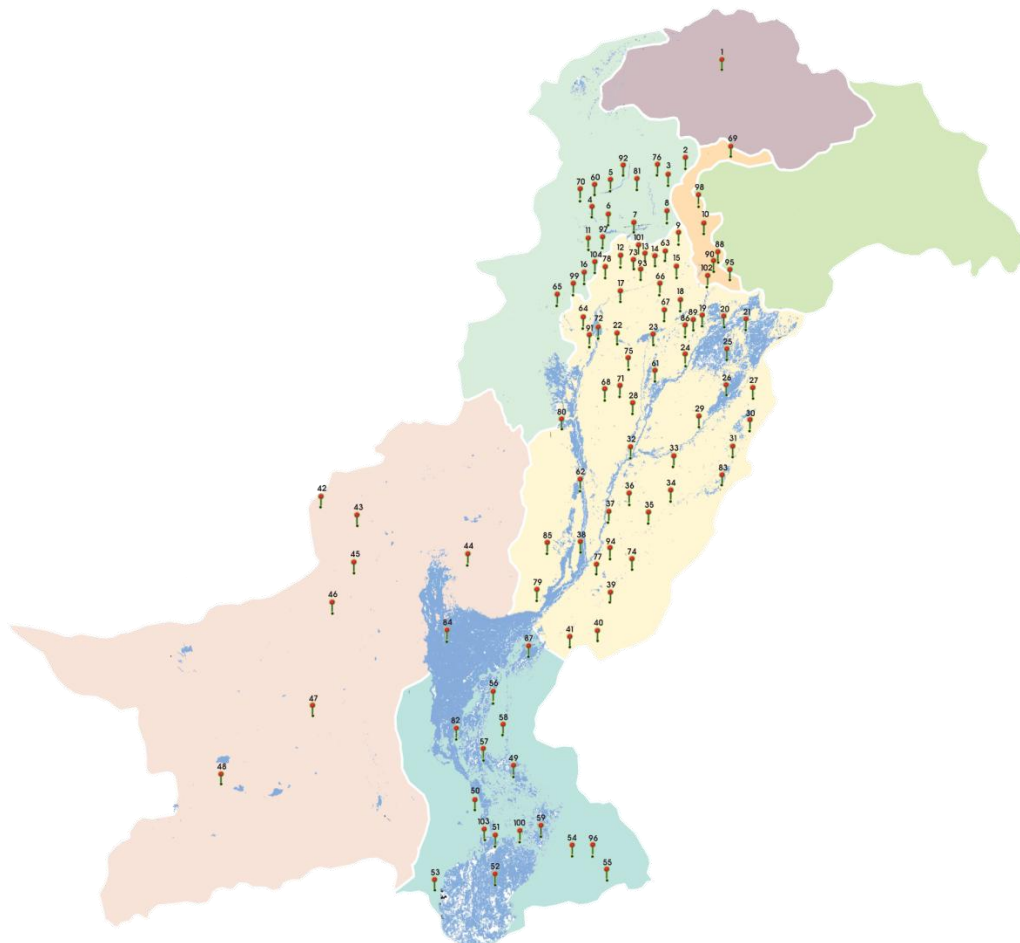

Figure: Our Outreach throughout Pakistan – 105 cities and towns, and counting

Promise of Insulin Eligibility Criterion &Registration Process

Each referred beneficiary has to complete an eligibility criterion form to analyze the financial needs and a registration documentation process. **Financial cut off for eligibility is PKR 40,000/- per month family income.**

The needs analysis sorts the beneficiary into a normal track or a fast track stream where if the child is in urgent need, he/she is provided immediate support.

See Annex I for registration form and Annex II for eligibility criteria form.

For each beneficiary we enroll, we ensure that we have back up funds for at least 6 months to ensure continuity and sustainability or pledge of a donor to support long term. The child is supported till enrolled in school/ university/ skills development + 1 year for job hunting, up to a max of 25 years of age.

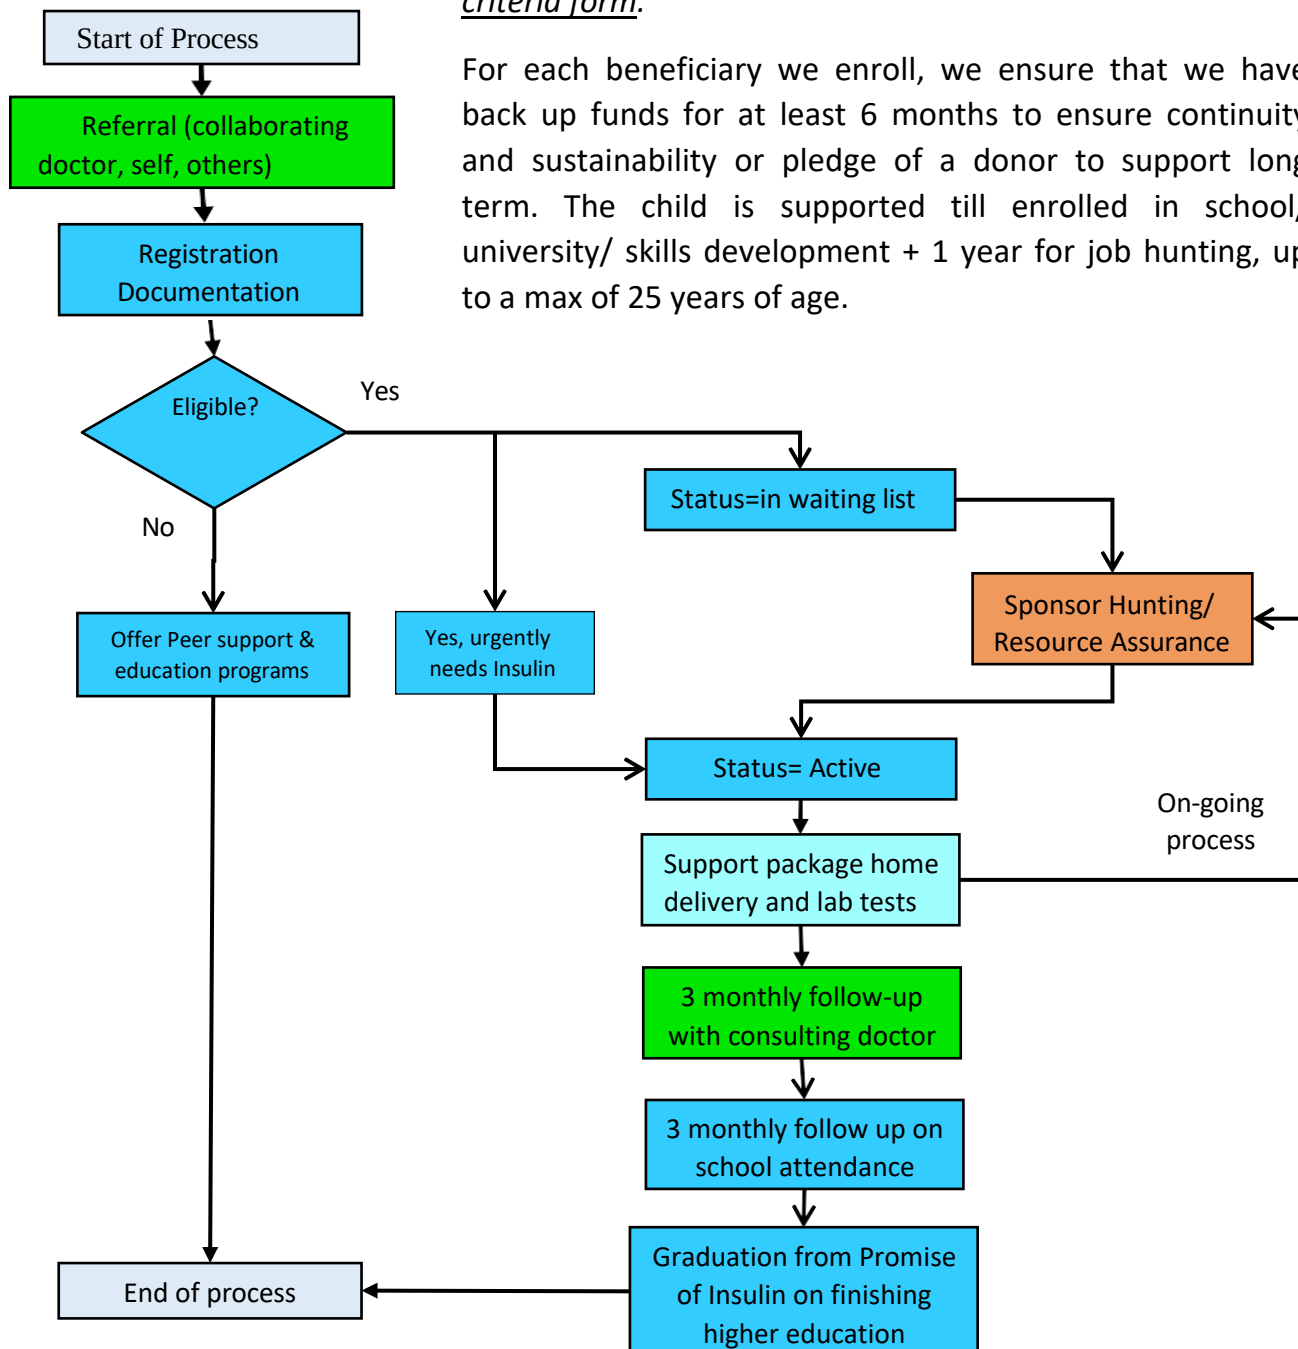

Figure: Registration and Delivery Process Model

Promise of Insulin

All numbers are rounded off

No of children currently supported = 1000

No of Children Waiting – Jan 2025 = 200

No of children expected to register / be referred in 2025 = 120

Funding needed per child = USD 480 / year

Target outreach number for 2030 = 6000

Supply Chain

On 3 monthly basis, each beneficiary receives a box containing his/her diabetes supplies at home if they have a refrigerator available at home. Those without fridges accessible to them at home or within the neighborhood are sent monthly supplies.

The insulin is packaged with ice packs in insulated boxes, and delivered to the homes of the registered children within 24-36 hours of insulin leaving the storage refrigerator.

To build on to this, we want to work on software development for pharmacy pickup in major cities for risk reduction as well as reduction in predicted storage requirements as the program expands.

In the box, are included:

- 3 months Insulin supply as prescribed by the consulting doctor after a medical review
- 300 x test strips
- Needles/syringes as applicable
- Lab test voucher
- Glucometer (once at the time of registration)

Figure: Insulated boxes containing support package ready for delivery

Medical Follow-ups

Each beneficiary must provide us with a copy of a fresh prescription and medical follow up on Promise of Insulin prescription booklets at least once every 03 months.

Follow-ups are done on our Promise of Insulin booklet, which includes log sheets to record blood sugar levels, to ensure that the consulting doctor and hospitals/centres are aware of the beneficiary status of the child with Meethi Zindagi.

[See Annex III for Promise of Insulin Follow-up Booklet](#)

Productive Futures

We believe that insulin and test strips are vitally important. But we do not stop at this! Meethi Zindagi, as the name implies a **sweet life**, does not want any beneficiary to become dependent on the support system.

The children being supported (except in special circumstance) are required to go to school and ensure minimum 70% attendance so that they can have better futures.

Note: Quite a few of our diabetes champions are now enrolled in universities of taking high school exams. Their futures can be as bright as their smiles!

Diabetes Education

The collaborating doctors and the health teams in their centers provide diabetes management education to each child they look after. Meethi Zindagi fills the gap by providing educational material, both digital (videos) and printed, followed up with regular telephonic diabetes education.

Meethi Zindagi has developed an evidence based, peer reviewed, and community focused book on type 1 diabetes management in simple and understandable language. The book named Structured Education for Type 1 diabetes understanding in Pakistan (SETUP), is available on our website in both Urdu and English: <https://meethizindagi.org/>

Digital education videos are hosted on a free to use web platform <https://type1diabetespk.org/>

Annex I- Sample Registration Form

Promise of Insulin Registration Form

رجسٹریشن فارم برائے انسولین کا وعدہ

Information for the referring doctor / person :

1. Please fill in the name of the child, contact information and signature of a parent/legal guardian.
2. WhatsApp a clear picture of the form and the latest prescription to 03086770106. Save the hard copy.
3. Please lodge a complaint by calling at 051-8313214 in case you do not receive an acknowledgement within 05 working days.
4. Please inform the parent / legal guardian to expect Meethi Zindagi's representative to contact them for further documentation.
5. Once the documentation process is completed, the child will be supported until they reach the adult age of 18 years, or in case of college/university education, the age of 21 years.

حوالہ دینے والے ڈاکٹر/مريض کے لیے معلومات

1. اس فارم میں بچے کا نام اور رابطہ نمبر لکھ کر پچھلے صفحے پر والدین/مرسر پرست کے دستخط کروائیں۔
2. 03086770106 پر بچے کی تصویر اور ڈاکٹر کا نسخہ واٹس ایپ کریں۔
3. 5 کاروباری دنوں کے اندر وصولی کی کال نہ آنے کی صورت میں 051-8313214 پر شکایت درج کرائیں۔
4. والدین/مرسر پرست کو آگاہ کریں کہ مزید دستاویزات اور معلومات کے لئے میٹھی زندگی کا نمائندہ ان سے رابطہ کرے گا۔
5. دستاویزات کا عمل مکمل ہونے کے بعد بچے کو 18 سال کی عمر تک، یا یونیورسٹی کا کالج کی تعلیم کی صورت میں 21 سال کی عمر تک انسولین اور سڑپیں فراہم کی جائیں گی۔
